Seakeeper Named Exclusive Stabilization Partner of Boston Whaler

Partnership with storied boat brand reflects company's commitment to bringing stabilization to small boats

California, Maryland (April 1, 2016) – Seakeeper Inc., the leader in marine stabilization, announced today that it has been named the exclusive stabilization partner of the legendary boat builder Boston Whaler. Seakeeper's innovative gyroscope technology is now available on two of Boston Whaler's popular Outrage models, the 350 Outrage and 420 Outrage. Both models boast the Seakeeper 5 as an option at the factory level. The partnership reflects the widespread adoption of Seakeeper's technology across the boating industry as the company solidifies its leadership position in the space.

Through this collaboration, Seakeeper units are seamlessly integrated into the design of the Boston Whaler models with a space specifically allocated for the gyro. The unique partnership is the result of hundreds of man-hours of testing Seakeeper's technology on Boston Whaler's unsinkable vessels. Boats including a Seakeeper are available now for purchase, and customers can contact their local Boston Whaler dealer for demo opportunities.

"We're so excited to bring our groundbreaking stabilization technology to Boston Whaler's top-of-the-line boats with this exclusive partnership," said Andrew Semprevivo, Seakeeper's Vice President of Sales and Marketing. "For the first time, Seakeeper technology has been integrated directly into the design and construction of Boston Whaler vessels, creating a streamlined finished product and a more enjoyable experience on the water for proud owners and guests of Boston Whaler boats."

Seakeeper's computer-controlled gyroscopes are all made in America, and each is installed directly inside the hull of the boat, where it creates no additional drag and has no effect on top speed.

"Integrating Seakeeper's technology into some of Boston Whaler's most popular models is part of our ongoing commitment to providing our customers with groundbreaking new features that

enhance their boating experience,” said Jeff Vaughn, Vice President of Sales, Marketing and Customer Service at Boston Whaler. “Anglers and recreational boaters who choose the Outrage models equipped with a Seakeeper will be impressed with the increased stability that now comes with the other pleasures of a Boston Whaler vessel.”

Since 1958, Boston Whaler has provided the safest, most exciting boats on the water. Boston Whaler’s accomplished team has developed a reputation for creating the best products and forging the best partnerships, resulting in unsinkable, legendary, innovative vessels engineered for a lifetime of enjoyment and dependability.

About Seakeeper Inc.

Founded in 2002 by a successful entrepreneur and a naval architect, Seakeeper is the global leader in marine stabilization. Seakeeper’s innovative technology changes the boating experience by eliminating up to 95% of all boat roll, the rocking motion that causes seasickness, fatigue and anxiety. Since selling its first gyro in 2008, Seakeeper has developed a growing catalog of gyros for an expanding range of boat sizes. Based in California, Maryland, USA, the company has over 125 employees globally, based in the U.S., U.K., Italy, Germany, Dubai and Singapore.
