

SEAKEEPER SOFTWARE UPDATE

PRODUCT SEAKEEPER 1 THROUGH 40

PURPOSE

This bulletin provides details of the functionalities designed in the Seakeeper gyro control module (GCM) and ConnectBox software update of August 2024.

BACKGROUND

Seakeeper is committed to continuous improvement, regularly releasing software updates to ensure our products remain at the forefront of technology and maintain peak reliability. These updates also address potential issues, providing users with the confidence that their equipment is continuously operating at its best, offering cutting-edge stability and safety.

DESCRIPTIONS

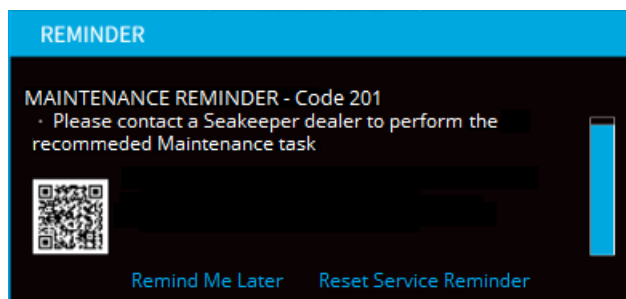

DATA LOGGER FUNCTIONALITY

Seakeeper models, with ConnectBox and GCM software released in August 2024, have an internal data logger capability. The logger function is triggered by an alarm or a user request from the Service screen override page. The logger's activation will capture Seakeeper controller network traffic, GPS positioning, NMEA 2000 SoG signal (speed over ground), and NMEA battery monitor messages for 70 seconds. A total of 200 logs can be stored in memory.

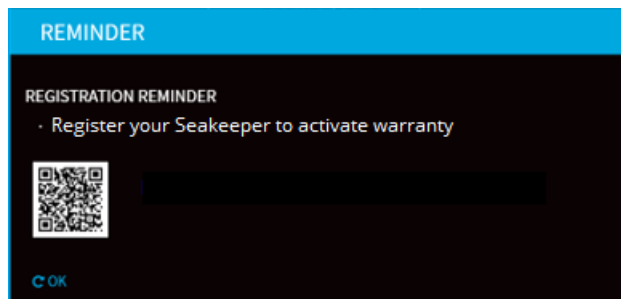

The Seakeeper [manuals website](#) contains operation manuals for each model. The manuals explain how affected users may opt out of allowing their Seakeeper to share this information.

NEW USER INTERFACE FEATURES

Seakeepers with the updated software will receive occasional reminders to assist owners to operate their Seakeeper safely and reliably. The reminders include a 1000-hour maintenance, a freshwater rinse, and a one-time warranty activation.
